

DIVERSIFIED
ARCHITECTURAL LIGHTING

POLES, ARMS & BASES

Diversified poles, arms and bases are constructed of high quality aluminum components. The decorative bases and arm supports are solid castings resistant to harsh, high traffic environments. A wide breadth of styles, models and sizes are available to complement any project's environment.

DIVERSIFIED
ARCHITECTURAL LIGHTING

Diversified Architectural Lighting is committed to providing solid, energy-efficient products manufactured to the highest possible standards of excellence. For complete specification information or to view our entire line of design solutions, visit www.divlighting.com

POLES 06

POLE & WALL MOUNTED ARMS

With a short or a long reach, with or without decorative accents, there are enough arm options available to accommodate any architectural project.

All arm castings are constructed of rugged cast aluminum for a maximum strength and structural integrity. The luminaire is either welded or bolted onto the arm, depending on the type of fixture.

Certain arm models are available in more than one size. The code for the selected arm must be included when ordering the luminaire.
